

Gabriel Francelino Voidaleski

Full Stack Developer - [Portfolio](#) · [GitHub](#)

Curitiba, Brazil | Phone: (41) 99196-7886 | Email: voidalzk@gmail.com

Professional Summary

Full Stack Developer with a degree in Systems Analysis and Development from UFPR, with experience across web development, data and infrastructure. At Banco do Brasil, I developed and maintained applications with Node.js, Vue.js and PHP, APIs and integrations with LLMs and RAG. Experience with PostgreSQL, MySQL, DB2, ETL/ELT, Python automation, Power BI and SUSE Linux environments. I also developed React, Java and Spring Boot applications as a freelancer, and automations and dashboards at the Public Prosecutor's Office of Paraná. Proactive and adaptable, with a willingness to learn new technologies and collaborate in problem solving.

Professional Experience

Banco do Brasil - Full Stack Developer Intern

Mar 2025 - Jul 2026

Automation and Analytics Team

- Developed and maintained full stack enterprise applications with Node.js, Vue.js and PHP, implementing features, enhancing existing systems and fixing issues.
- Developed Node.js APIs and backends to integrate web interfaces, internal services, enterprise systems, databases and multiple information sources.
- Built intermediary APIs and integration workflows for LLMs and AI services, including routes, request and response handling and communication with consuming applications.
- Contributed to RAG solutions and vector indexing, querying, retrieving and preparing information to generate responses grounded in enterprise sources.
- Developed SQL queries and data models in PostgreSQL, MySQL and DB2, validating, transforming and integrating information through ETL/ELT workflows.
- Built Python routines and automations for data processing, recurring tasks and system integration.
- Used Power BI for data analysis and visualization.
- Supported SUSE Linux servers and application environments, investigating and resolving issues across applications, APIs, databases and integrations.

Freelance Developer - Software Projects

Jul 2026 - Present

- Developed web applications and interfaces with React, Java and Spring Boot for freelance projects, implementing features and improvements according to project needs.

Public Prosecutor's Office of Paraná - Intern

Jul 2022 - Aug 2024

- Built administrative automations with Google Apps Script and JavaScript to streamline recurring tasks, and developed Google Sheets dashboards to organize, monitor and visualize management data.

Education

Federal University of Paraná (UFPR)

Aug 2026

Technology Degree in Systems Analysis and Development - completed

Degree project - Appunture: mobile app for acupuncture point lookup with a 3D body map and AI assistant, built with React Native and Spring Boot, OAuth authentication, Google Cloud and an offline-first architecture with data synchronization.

Technical Skills

Languages: JavaScript, TypeScript, PHP, Python and Java

Frameworks and development: React, Node.js, Vue.js, React Native, Angular and Spring Boot

Databases: PostgreSQL, MySQL and DB2; SQL; knowledge of MongoDB and Oracle Database

Infrastructure and tools: Git, GitHub, GitLab, SUSE Linux, Azure, Google Cloud, Docker, Kubernetes

AI and assisted development: LLM and RAG integrations; Claude, Codex and GitHub Copilot.

Methodologies: Kanban and Scrum

Languages

Advanced English - English Live Corporate, completed in 2022
